Summary

Building production web apps for **fintech, AI platforms, and enterprise systems**. Specialized in complex data visualization, real-time features, and scalable architectures.

Work Experience

Egar Technology · 2024.04 – present

International company specializing in software development for financial markets.

Datashop (MOEX)

Stock market analysis application for traders and analysts.

- Developing user interfaces using **React, Redux, PrimeReact**.
- Implementing complex data visualizations with **Chart.js** and [Plotly.js](#).

Document Management Platform (SBER)

Enterprise document management and logistics system.

- Managing microfrontend architecture with **Webpack and Module Federation**.
- Developing dashboards using **React, Redux Toolkit, MUI tables, and MUI Kit**.
- Controlling forms with **React Hook Form and Yup** validation for complex multipage states.

Fins-flow (FinBeat)

Web platform for building applications for web and mobile simultaneously.

- Developing complex UI components using **React, Redux, RTK, and PrimeReact**.
- Integrating with **IndexedDB** for client-side storage.
- Managing forms with **React Hook Form and Yup** validation for complex schemas.

Corporate Marketplace (Egar)

Web app for purchasing corporate staff with admin panels for granting user gifts.

- Built frontend with **Ant Design, Styled Components, Redux, and React Query**.
- Leading frontend development and managing deployment with **nginx and Docker** (front-ops).

Business Activity Monitoring Platform (Egar)

Application for creating, administering, and monitoring rules based on complex banking flows.

- Developed frontend using **Mantine, TanStack, and Redux**.
- Managed containerized deployment with **Docker** (front-ops).
- Customized **React-Query-Builder** components and implemented internalization with **i18n**.

Freelance/Part-Time · 2023 – 2024

Telegram Channel Analytics

Application for analyzing Telegram channel activity and engagement metrics. Bot and phone authentication available.

- Developed data-scraping scripts for groups and channels using **Telegram API and TypeScript**.
- Implemented authentication with **JWT** and user data storage using **Express and MongoDB**.
- Built UI with **Ant Design and ECharts** for data visualization with multiple filters and reports.
- Enabled clients to integrate gamification into social app administration.

Gen AI Apps Ecosystem

Multi-purpose AI platform with chatbots and media-generation capabilities.

- Built frontend with **React/Next.js, Radix UI, Shadcn, Tailwind CSS, TanStack, and Redux.**
- Implemented authentication, content-generation flows, and token-purchase systems using **MongoDB, Express, OAuth, and JWT.**
- Integrated AI providers including **OpenAI and fal.ai.**
- Developed admin panels for managing user emailing, available currencies, and access grants.

Neiro AI · 2023

Deep-learning startup with 50+ team members and \$100M annual revenue.

Frontend development for the company's ecosystem, including the main marketing website and the flagship AI content-creation studio.

- Core Products: Developed **neiro.ai** (marketing platform) and **studio.neiro.ai** (subscription-based AI content studio).
- Tech Stack: **React, Tailwind CSS, MobX, Firebase. Enhanced UI with CSS Modules, Swiper, and Anime.js.**
- Key Responsibilities: Payment integration (**Square Payments**), performance optimization, SEO (**Lighthouse 90+**), and accessibility improvements.
